

Nursing Home Visitation

It is the policy of Victoria Nursing and Rehabilitation Center to ensure safe visitation to our residents.

Visitation can be conducted through different means based on a facility's structure and residents' needs, such as in resident rooms, dedicated visitation spaces and outdoors. Regardless of how visits are conducted, certain core principles and best practices reduce the risk of COVID-19 transmission:

Core Principles of COVID-19 Infection Prevention

- Victoria Nursing and Rehabilitation Center provides guidance (e.g., posted signs at entrances) about recommended actions for visitors who have a positive viral test for COVID-19, symptoms of COVID-19, or have had close contact with someone with COVID-19.
- Visitors with confirmed COVID-19 infection or compatible symptoms should defer non-urgent in-person visitation until they meet CDC criteria for healthcare settings to end isolation.
- For visitors who have had close contact with someone with COVID-19 infection, it is safest to defer non-urgent in-person visitation until 10 days after their close contact if they meet criteria described in CDC healthcare guidance (e.g., cannot wear source control).
- Hand hygiene (use of alcohol-based hand rub is preferred)
- Face covering or mask (covering mouth and nose) in accordance with CDC guidance
- Instructional signage throughout the facility and proper visitor education on COVID-19 signs and symptoms, infection control precautions, other applicable facility practices (e.g., use of face covering or mask, specified entries, exits and routes to designated areas, hand hygiene)
- Cleaning and disinfecting high-frequency touched surfaces in the facility often, and designated visitation areas after each visit.
- Appropriate staff use of Personal Protective Equipment (PPE)
- Effective cohorting of residents (e.g., separate areas dedicated to COVID-19 care)
- Resident and staff testing conducted as required by CMS and CDC guidelines.

These core principles are consistent with the Centers for Disease Control and Prevention (CDC) guidance for nursing homes, and should be adhered to at all times. Additionally, visitation should be person-centered, consider the residents' physical, mental, and psychosocial well-being, and support their quality of life. The risk of transmission can be further reduced through the use of physical barriers (e.g., clear Plexiglass dividers, curtains). Victoria Nursing and Rehabilitation Center will enable visits to be conducted with an adequate degree of privacy. Visitors who are unable to adhere to the core principles of infection prevention will not be permitted to visit or will be asked to leave. By following a person-centered approach and adhering to these core principles, visitation can occur safely based on the below guidance.

Nursing Home Visitation

To limit the spread of COVID-19, source control measures should be implemented for everyone in the facility, regardless of symptoms. It is also important to maintain a safe distance (at least 6 feet) between both patients and staff, as much as possible, as well as maintaining hand hygiene.

Screening anyone coming into the facility for COVID-19

1- Following CDC guidelines screening of individuals for COVID-19 without symptoms is no longer supported. The Agency for Health Care Administration therefore recommends that long-term care facilities need no longer perform COVID-19 related screening on visitors.

2- The facility will make sure infection control procedures are followed upon entering the facility.

The designated person responsible for ensuring that staff and visitors adhere to the policies and procedures and education policies will be the Infection Control Preventionist and Compliance Officer.

Visitors are not required to submit proof of any vaccination or immunization.

Victoria Nursing and Rehabilitation Center acknowledges the toll that separation and isolation has taken. Victoria Nursing and Rehabilitation Center also acknowledges that there is no substitute for physical contact, such as the warm embrace between a resident and their loved one. Therefore, if the resident is fully vaccinated, they can choose to have close contact (including touch) with their visitor.

Outdoor Visitation

1. While taking a person-centered approach and adhering to the core principles of COVID-19 infection prevention, outdoor visitation is preferred when the resident and/or visitor are not up-to date with all recommended COVID-19 vaccine doses. Outdoor visits generally pose a lower risk of transmission due to increased space and airflow. For outdoor visits, Victoria Nursing and Rehabilitation Center has accessible and safe outdoor spaces for visitation.
2. However, weather considerations (e.g., inclement weather, excessively hot or cold temperatures, poor air quality) or an individual resident's health status (e.g., medical condition(s), COVID-19 status, quarantine status) may hinder outdoor visits. When conducting outdoor visitation, all appropriate infection control and prevention practices will be followed.

Indoor Visitation

1. Victoria Nursing and Rehabilitation Center will allow indoor visitation at all times and for all residents as permitted under the regulations. While previously acceptable during the PHE, Victoria Nursing and Rehabilitation Center will no longer limit the frequency and length of visits for residents, the number of visitors, or require advance scheduling of visits.
2. Although there is no limit on the number of visitors that a resident can have at one time, visits will be conducted in a manner that adheres to the core principles of COVID-19 infection prevention and does not increase risk to other residents. Victoria Nursing and Rehabilitation Center will ensure that physical distancing be maintained during peak times of visitation (e.g., lunch time, after business hours, etc.). Victoria Nursing and Rehabilitation Center will avoid large gatherings (e.g., parties, events) where large numbers of visitors are in the same space at the same time and physical distancing cannot be maintained. During indoor visitation, Victoria Nursing and Rehabilitation

Nursing Home Visitation

Center will limit visitor movement in the facility. For example, visitors should not walk around different halls of the facility. Rather, they should go directly to the resident's room or designated visitation area.

3. If a resident's roommate is not up-to-date with all recommended COVID-19 vaccine doses, or immunocompromised (regardless of vaccination status), visits will try not be conducted in the resident's room, if possible. For situations where there is a roommate and the health status of the resident prevents leaving the room, Victoria Nursing and Rehabilitation Center will attempt to enable in-room visitation while adhering to the core principles of infection prevention.
4. A resident, may designate a visitor who is a family member, friend, guardian, or other individual as an essential caregiver. Victoria Nursing and Rehabilitation Center allows in-person visitation by the essential caregiver for at least 2 hours daily.

Victoria Nursing and Rehabilitation Center allows In-person visitation in all of the following circumstances, unless the resident, client, or patient objects:

1. End-of-life situations.
2. A resident, client, or patient who was living with family before being admitted to the provider's care is struggling with the change in environment and lack of in-person family support.
3. The resident, client, or patient is making one or more major medical decisions.
4. A resident, client, or patient is experiencing emotional distress or grieving the loss of a friend or family member who recently died.
5. A resident, client, or patient needs cueing or encouragement to eat or drink which was previously provided by a family member or caregiver.
6. A resident, client, or patient who used to talk and interact with others is seldom speaking.

Face coverings and physical distancing during visits

- If Victoria Nursing and Rehabilitation Center's county COVID-19 community transmission is high, everyone in a healthcare setting should wear face coverings or masks.
- If Victoria Nursing and Rehabilitation Center's county COVID-19 community transmission is not high, the safest practice is for residents and visitors to wear face coverings or masks, however, Victoria Nursing and Rehabilitation Center does not require visitors to wear face coverings or masks while in the facility, except during an outbreak. The facility's policies regarding face coverings and masks are based on recommendations from the CDC, state and local health departments, and individual facility circumstances.

Nursing Home Visitation

- Regardless of the community transmission level, residents and their visitors when alone in the resident's room or in a designated visitation area, may choose not to wear face coverings or masks and may choose to have close contact (including touch). Residents (or their representative) and their visitors should be advised of the risks of physical contact prior to the visit. If a roommate is present during the visit, it is safest for the visitor to wear a face covering or mask.
- While not recommended, residents who are on transmission-based precautions (TBP) or quarantine can still receive visitors. In these cases, visits should occur in the resident's room and the resident should wear a well-fitting facemask (if tolerated). Before visiting residents, who are on TBP or quarantine, visitors should be made aware of the potential risk of visiting and precautions necessary in order to visit the resident. Visitors should adhere to the core principles of infection prevention. Victoria Nursing and Rehabilitation Center is not required to provide PPE for visitors.
- The Agency for Health Care Administration does not recommend facility-wide COVID-19 mask mandates for employees. The Agency for Health Care Administration recommends facilities employ standard protocols related to the use of masks/"source control" when providing direct care, rather than protocols that solely focus on COVID-19 as a reason for masking. Following the Agency for Health Care Administration recommendations Victoria Nursing and Rehabilitation Center, the facility wide COVID-19 mask mandate for employees is no longer recommended, but employees who wish to continue using a mask can choose to do it.
- Global masking or similar COVID-19 "source control" requirements for visitors is no longer recommended following The Agency for Health Care Administration's recommendations. Victoria Nursing and Rehabilitation Center does NOT utilize haphazard COVID19 protocols and mandates as a way to prevent widespread visitation.
- Victoria Nursing and Rehabilitation Center allows the use of a mask or respirator with higher-level protection that is not visibly soiled by visitors or staff who chose that option based on their individual preference.

Indoor Visitation during an Outbreak Investigation

1. An outbreak investigation is initiated when a single new case of COVID-19 occurs among residents or staff to determine if others have been exposed. To swiftly detect cases, Victoria Nursing and Rehabilitation Center to adhere to CMS regulations and guidance for COVID-19 testing, including routine staff testing, testing of individuals with symptoms, and outbreak testing.
2. When a new case of COVID-19 among residents or staff is identified, Victoria Nursing and Rehabilitation Center will immediately (but not earlier than 24 hours after the exposure, if known) begin outbreak testing in accordance with CMS QSO 20-38-NH REVISED and CDC guideline.
3. While it is safer for visitors not to enter Victoria Nursing and Rehabilitation Center during an outbreak investigation, visitors must still be allowed in the facility. Visitors will be made aware of the potential risk of visiting during an outbreak investigation and adhere to the core principles of infection prevention. If residents or their representative would like to have a visit during an outbreak investigation, they should wear face coverings or masks during visits and visits should ideally occur in the resident's room. While an outbreak investigation is occurring, Victoria Nursing

Nursing Home Visitation

and Rehabilitation Center will limit visitor movement in the facility. For example, visitors should not walk around different halls of the facility. Rather, they should go directly to the resident's room or designated visitation area. Also, visitors should physically distance themselves from other residents and staff, when possible.

Visitor Testing and Vaccination

1. Victoria Nursing and rehabilitation Center encourages visitors to be tested on their own prior to coming to the facility (e.g., within 2–3 days). Similarly, visitors are encouraged to become vaccinated when they have the opportunity.
2. While visitor testing and vaccination can help prevent the spread of COVID-19, visitors are not required to be tested or vaccinated (or show proof of such) as a condition of visitation. This also applies to representatives of the Office of the State Long-Term Care Ombudsman and protection and advocacy systems, as described below.
3. CMS strongly encourages all visitors to become vaccinated and Victoria Nursing and Rehabilitation Center educates and also encourages visitors to become vaccinated. Visitor testing and vaccination can help prevent the spread of COVID-19 and facilities may ask about a visitors' vaccination status, however, visitors are not required to be tested or vaccinated (or show proof of such) as a condition of visitation. If the visitor declines to disclose their vaccination status, the visitor should wear a face covering or mask at all times. This also applies to representatives of the Office of the State Long-Term Care Ombudsman and protection and advocacy systems, as described below.

Compassionate Care Visits

1. At Victoria Nursing and Rehabilitation Center compassionate care visits are allowed at all times. Previously during the PHE, there were some scenarios where residents should only have compassionate care visits. However, visitation is now allowed at all times for all residents, in accordance with CMS regulations.

Required Visitation

1. Victoria Nursing and Rehabilitation Center will not restrict visitation without a reasonable clinical or safety cause, consistent with 42 CFR § 483.10(f) (4) (v). Victoria Nursing and Rehabilitation Center facilitates in-person visitation consistent with the applicable CMS regulations, which can be done by applying the guidance stated above.
2. Residents have the right to make choices about aspects of his or her life in the facility that are significant to the resident. Visitors, residents, or their representative should be made aware of the potential risk of visiting and necessary precautions related to COVID-19 in order to visit the resident. However, if a visitor, resident, or their representative is aware of the risks associated with visitation, and the visit occurs in a manner that does not place other residents at risk (e.g., in the resident's room), the resident must be allowed to receive visitors as he/she chooses.

Entry of Healthcare Workers and Other Providers of Services

Nursing Home Visitation

1. Health care workers who are not employees of the facility but provide direct care to the facility's residents, such as hospice workers, Emergency Medical Services (EMS) personnel, dialysis technicians, laboratory technicians, radiology technicians, social workers, clergy, etc., are permitted to come into Victoria Nursing and Rehabilitation Center as long as they are not subject to a work exclusion due to an exposure to COVID-19 or showing signs or symptoms of COVID-19 after being screened.
2. In addition to health care workers, personnel educating and assisting in resident transitions to the community are permitted entry consistent with this guidance.
3. EMS personnel do not need to be screened, so they can attend to an emergency without delay.
4. Staff, including individuals providing services under arrangement as well as volunteers, should adhere to the core principles of COVID-19 infection prevention and must comply with COVID-19 testing requirements.

Communal Activities and Dining

1. While adhering to the core principles of COVID-19 infection prevention, communal activities and dining may occur. Book clubs, crafts, movies, exercise, and bingo are all activities that can be facilitated with alterations to adhere to the guidelines for preventing transmission. The safest approach is for everyone, particularly those at high risk for severe illness, to wear a face covering or mask while on in communal areas of the facility.
2. Victoria Nursing and Rehabilitation Center will permit residents to leave the facility as they choose. Should a resident choose to leave, the facility will remind the resident and any individual accompanying the resident to follow all recommended infection prevention practices such as wearing a face covering or mask, especially for those at high risk for severe illness and when community transmission is high, performing hand hygiene and encouraging those around them to do the same.
3. Upon the resident's return, Victoria Nursing and Rehabilitation Center will take the following actions:
 - a. Screen residents upon return for signs or symptoms of COVID-19.
 - i. If the resident or family member reports possible close contact to an individual with COVID-19 while outside of the nursing home, Victoria Nursing and Rehabilitation Center will follow the CDC's guidance for residents who have had close contact and follow the next steps regarding testing and quarantine. •
 - ii. If the resident develops signs or symptoms of COVID-19 after the outing, Victoria Nursing and Rehabilitation Center will follow see the CDC's guidance for residents with symptoms of COVID-19.
 - b. In most circumstances, quarantine is not recommended for residents who leave the facility for less than 24 hours (e.g., for medical appointments, community outings with family or

Nursing Home Visitation

- friends) except in certain situations, described in the CDC's empiric transmission-based precautions guidance.
- c. Residents who leave the facility for 24 hours or longer should generally be managed as a new admission, as recommended by the CDC in the Managing admissions and residents who leave the facility section.
 - d. Monitor residents for signs and symptoms of COVID-19 daily.

Compliance with the Policy

Victoria Nursing and Rehabilitation Center requires visitors to adhere to the visitation policy and may suspend in-person visitation of a specific visitor if the visitor violates these policies and procedures.

Victoria Nursing and Rehabilitation Center will provide the visitation policies and procedures to the agency when applying for initial licensure, licensure renewal, or change of ownership.

Victoria Nursing and Rehabilitation Center will make the visitation policies and procedures available to the agency for review at any time, upon request.
